*Your tank must be equipped with a WESROC tank monitor to use this mobile app and web service.

Reliance was started in 1932 by Harold C. Miller. Delivering home heating oil in the metro Toledo area. In the early 1950's his two sons Harold A. Miller and Larry L. Miller joined the business growing the products we offer to diesel, gasoline, propane, retail products, industrial and medical gases. We are currently operated by the third generation; we continue to look for ways to better serve our customers.

Because we are family owned, we especially value the importance of exceptional service. Our family owes all of our success to our loyal customers and extraordinary employees. We cannot thank you all enough for all of your support over the years.

Our mission is to provide our customers with a level of service that can't be matched by our competitors. Whether you need oil or propane for your home, business, agricultural, or industrial application. Reliance is ready to customize a program tailored to meet your needs.

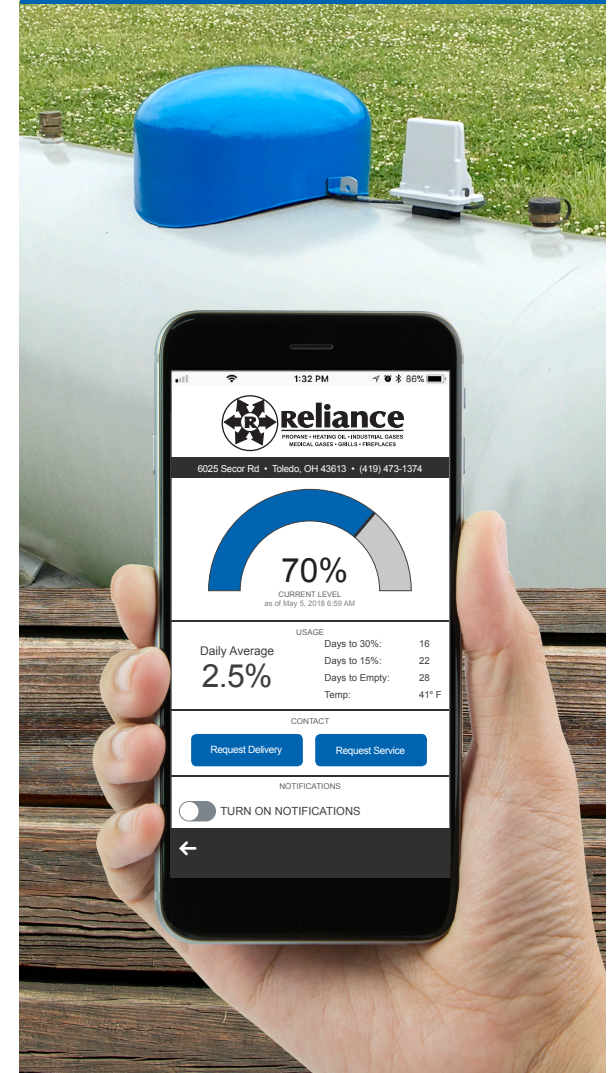

**"Anyone can deliver oil and propane,
we deliver service!"**

WHAT GOES ON YOUR TANK?

The monitoring equipment takes only minutes to install, and your tank remains completely sealed.

Once the monitor is attached, we check the system to ensure the equipment is communicating properly with the software at our headquarters.

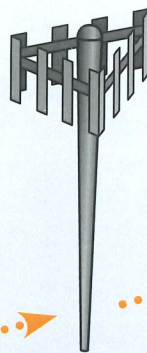

The monitor is very durable, and performs in the harshest weather conditions that our climate can produce. We trust only the best monitoring equipment with our customer's tanks. WESROC® tank monitors are American made, and the most reliable in the industry.

HOW DOES IT COMMUNICATE?

CELLULAR TECHNOLOGY

Your tank information is sent via cellular network, then through the internet, providing a secure and reliable communication link between your tank and our monitoring system.

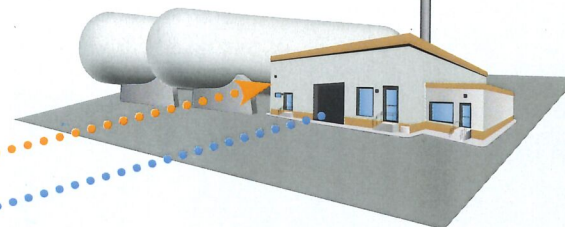

If cellular coverage is poor in your area, other communication options are available.

RELIABLE DELIVERIES

WITH PEACE OF MIND

Rest assured that your fuel tank will always be monitored and deliveries will be timely, thus ensuring your year-round comfort.

WHY IS THIS MONITOR NECESSARY?

Most of all, when we monitor the status of your tank, it ensures that **we never let you run out of fuel.**

Monitoring helps us plan ahead. For example, our customers need to have the necessary amount of propane in their tanks before the winter storm hits. Monitoring enables us to stay ahead of the weather, and keep your home protected from the cold.

In addition to monitoring your tank level, our system also alerts us to any erratic changes in your tank level.

This enables us to be more responsive and efficient so that we can provide the best possible service to our valued customers.
